U.S. Congress
Washington, D.C. 20515

Dear Representative:

We rely on American made energy to power our daily lives, communities and to grow a more prosperous future. Americans deserve clean, safe, reliable, abundant and affordable energy so that our families, communities and businesses can all share the opportunities American energy creates. Our country cannot afford to block access to new energy supplies and risk losing our energy advantage. That's why we ask you to oppose legislation being considered by the U.S. House of Representatives next week that would slow scientific surveys and prevent access to new sources of American offshore energy in the Outer Continental Shelf.

For more than seven decades, energy development in the Gulf of Mexico has worked collaboratively alongside tourism, fishing and Defense Department training activities. But H.R. 205 would permanently extend the eastern Gulf of Mexico moratorium on oil and natural gas activities. The Congressional Budget Office conservatively estimates that this could cost taxpayers \$400 million in revenue over the next 10 years. Similarly, H.R. 1941 would block offshore energy development in the Pacific and Atlantic planning areas, and H.R. 1146 would lock up energy resources in the Alaskan Coastal Plain.

Congress should support progress. Modern energy technologies have enabled an impressive record of environmental stewardship and innovation. But when the government chooses to arbitrarily and permanently close off areas to exploration and potential development, we simply increase our dependency on foreign sources. This reality is visible in places like California and Massachusetts. Despite abundant offshore oil and natural gas resources, California imports 57 percent of its oil supply, a staggering 37 percent of which comes from Saudi Arabia. Meanwhile, to meet energy needs each winter, Massachusetts imports liquefied natural gas from Russia.

American energy is produced with a smaller carbon footprint under significantly stronger environmental protections than energy produced anywhere else in the world. We ask you to embrace these homegrown opportunities that benefit American families, create high-wage jobs, strengthen the U.S. economy and protect our environment.

Next week, the House of Representatives is expected to consider legislation undercutting domestic energy security and economic opportunity by limiting American energy access. We urge you to reject these bills and instead stand up for energy produced in America, by American workers for the benefit of American families.

Sincerely,

American Chemistry Council
